Introduction

At e-Track we innovate.

From design and concept to prototyping and production; e-Track delivers intelligent key management products for sector leading businesses, globally.

e100 system

About e-Track.

e-Track Ltd is a UK company launched in 2019 with an innovative take on intelligent key management through design, manufacture, and supply of software driven systems.

We design and develop key management systems that provide a secure, tamper proof storage solution to manage key sets around the clock.

Our mobile responsive e-Track web software is a user-friendly application that provides complete control of the key management systems in a versatile way, allowing for growth of a network of cabinets and valuable analytics on the go.

What we do

KEY MANAGEMENT SYSTEMS

We provide businesses with traceability over crucial key bunches and their users.

UNIQUELY DESIGNED

Key management systems are modular and engineered to meet specific sites and operational requirements.

DATA DRIVEN RESULTS

We turn your key information into analytical data that drives operational results.

WE INVEST IN TECH

We’re experts at using cutting-edge technology which allows us to create features that our competitors currently do not offer.

What is Key Management?

If your company deals with keys being withdrawn and deposited by different personnel, it could be beneficial to manage this systematically using networked electronic key management cabinets.

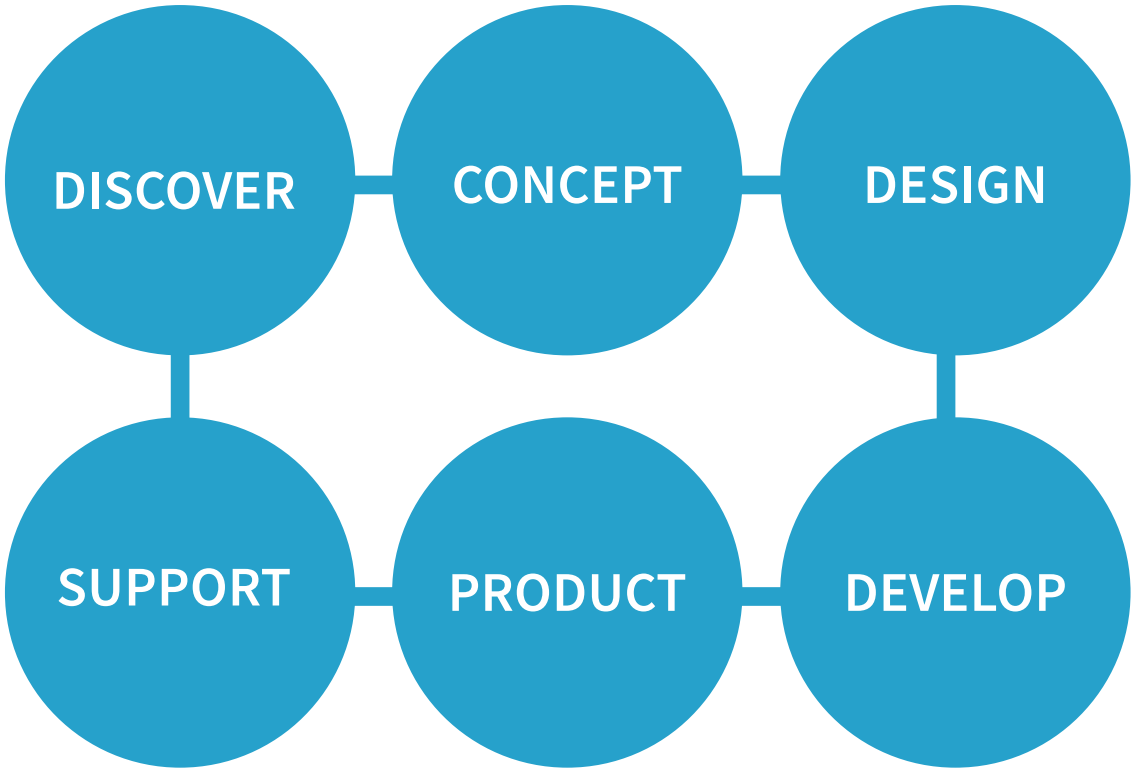
Using e-Track systems with embedded analytics, you are provided with a platform whereby you can control access to these cabinets and view real time data relative to users and keys through events, bookings and alarms.

With this intelligence, you can ensure Compliance and Health & Safety in the work place whilst improving efficiency and potentially saving significant effort, time and money.

How does it work?

- Keys are linked to efobs which are sealed together.
- Users are assigned to cabinets and efobs individually or as part of a user group.
- Systems are manageable using the web software, touch screen software and a mobile app.
- Access on the cabinets is granted via PIN code, card reader and fingerprint for extra security.
- Cabinets can be networked and controlled by managers on multi sites or admins of all cabinets.
- Integration with other databases can be done via the web API.

Why e-Track?



We're a passionate company who believe in high quality goods and services.

We care about our client requests and understand that every business is different, so we look at each challenge from the client's point of view and share the vision for improvement.

The outcome is more than just a product, **it's a partnership.**

Industries we work with

- Automotive
- Hospitality
- Property and Estates
- Education
- Manufacturing
- Retail
- Entertainment
- Military and Defence
- Stadiums and Venues
- Healthcare
- Prisons and Secure Facilities
- Vehicle Access and Logistics

Systems

We currently have 7 systems available, as well as bespoke items and our increasing range.

Operating from a single main controller with a touchscreen or keypad, systems can be assembled together with up to 14 connected extension cabinets.

Each of our systems have integrated access control readers for additional security -

* Fingerprint
* Card Reader
* PIN

Smart Security

Specifications

- Additional UPS enclosures for prolonged isolated usage
- Mechanical and electronic all key override
- Keypad, 5” or 10” touch screen
- 10mm polycarbonate doors
- 1.5mm mild steel construction
- API integration ready
- High secure locks
- Mobile compatible - pre book keys from any location
- Dynamic key management across multiple sites
- Multi-colour LEDs with withdrawal and return indicators
- RFiD detection
- Modular design allowing for future expansion
- Off set key positions for maximum hanging space
- Magnetic locks with sensory state detection
- Battery back up and mechanical override
- Easy maintenance and service
